No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts, 01970) for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1991 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 19

NUMBER 1, MARCH 1991

PEDRO L. TORNEL, ENCARNACIÓN MUÑOZ-DELGADO, AND CECILIO J. VIDAL. Inhibition of Cholinesterases by the Zwitterionic Detergent 3-[(3-Cholamidopropyl)dimethylammonio]-1-propanesulfonate (CHAPS)	1
RALPH GOLBIK, HOLGER NEEF, GERHARD HÜBNER, STEPHAN KÖNIG, BRIGITTA SELIGER, LUDMILLA MESHALKINA, GERMAN A. KOCHETOV, AND ALFRED SCHELLENBERGER. Function of the Aminopyrimidine Part in Thiamine Pyrophosphate Enzymes	10
DOV BIRNBAUM AND STANLEY SELTZER. The Secondary β -Deuterium Isotope Effect in Dark Adaptation of Bacteriorhodopsin Containing Retinal-20,20,20- d_3	18
CURT W. BRADSHAW, C.-H. WONG, WERNER HUMMEL, AND MARIA-REGINA KULA. Enzyme-Catalyzed Asymmetric Synthesis of (<i>S</i>)-2-Amino-4-phenylbutanoic Acid and (<i>R</i>)-2-Hydroxy-4-phenylbutanoic Acid. . . .	29
CAROL A. CAPERELLI AND R. ROBERT MCKELLAR. Glycinamide Ribonucleotide Analogue Probes for Glycinamide Ribonucleotide Transformylase	40
ULF BERG, JOHANNA DEINUM, PER LINCOLN, AND JAN KVASSMAN. Stereochemistry of Colchicinoids. Enantiomeric Stability and Binding to Tubulin of Desacetamidocolchicine and Desacetamidoisocolchicine	53
MARTINE URRUTIGOITY, MICHEL BABOULENE, AND ARMAND LATTES. Use of Pyrocarbonates for Chemical Modification of Histidine Residues of Horseradish Peroxidase	66
JAAK JÄRV AND ULF RAGNARSSON. Linear Free Energy Relationships in cAMP-Dependent Protein Kinase Reactions with Synthetic Substrates	77
TAJ MOHAMMAD, WILLIAM M. BAIRD, AND HARRY MORRISON. Photochemical Covalent Binding of <i>p</i> -Methoxycinnamic Acid to Calf Thymus DNA	88
ALBRECHT BERKESSEL. Methyl-Coenzyme M Reductase: Model Studies on Pentadentate Nickel Complexes and a Hypothetical Mechanism	101
REVIEWS	
BURT ZERNER. Recent Advances in the Chemistry of an Old Enzyme, Urease.	116

NUMBER 2, JUNE 1991

PETRA WIRTH, JEROME SOUPPE, DENIS TRITSCH, AND JEAN-FRANÇOIS BIELLMANN. Chemical Modification of Horseradish Peroxidase with Ethanal-Methoxypolyethylene Glycol: Solubility in Organic Solvents, Activity, and Properties	133
SERGE AUVIN, OLIVIER COCHET, NATHALIE KUCHARCZYK, FRANÇOIS LE GOFFIC, AND BERNARD BADET. Synthesis and Evaluation of Inhibitors for <i>Escherichia coli</i> Glucosamine-6-phosphate Synthase	143
RICHARD WOLFENDEN AND YU-LAN LIANG. Relative Free Energies of Solvation of P-O, P-N, and P-C Derivatives Related to Phosphoramidate Inhibitors of Metallopeptidases.	152

REVIEWS	
FUMIO TODA. Molecular Recognition	157
YOSHIKI OHSHIRO AND SHINOBU ITOH. Mechanism of Amine Oxidation by Coenzyme PQQ.....	169
CONFERENCE PROCEEDINGS	
RONALD E. VIOLA. Twelfth Enzyme Mechanisms Conference.....	190
BOOK REVIEW	
TERUO MATSUURA. <i>Bioorganic Photochemistry</i> , Vol. 1, <i>Photochemistry and the Nucleic Acids</i> . Edited by Harry Morrison.....	225
IN MEMORIAM	
TERUO MATSUURA. Professor Toshio Goto. April 24, 1929–August 29, 1990.....	226

NUMBER 3, SEPTEMBER 1991

KUNNUMAL BABURAJ AND SUSHEEL DURANI. Exploring Arylglyoxals as the Arginine Reactivity Probes. A Mechanistic Investigation Using the Buffer and Substituent Effects	229
MARK A. LEVY, BRIAN W. METCALF, MARTIN BRANDT, JILL M. ERB, HYE-JA OH, JULIE I. HEASLIP, HWA-KWO YEN, LEONARD W. ROZAMUS, AND DENNIS A. HOLT. 3-Phosphinic Acid and 3-Phosphonic Acid Steroids as Inhibitors of Steroid 5 α -Reductase: Species Compari- son and Mechanistic Studies.....	245
CARLOS F. BARBAS III AND CHI-HUEY WONG. Overexpression and Sub- strate Specificity Studies of Phosphodeoxyribomutase and Thymidine Phosphorylase	261
DAVID R. WALT, JUNG-YIE KAO, AND TIANMEI OUYANG. Enzyme-Cata- lyzed Synthesis of Fluoromalonyl-CoA	270
SATENDRA SINGH AND GLENN DRYHURST. Interactions between 5,6-Dihy- droxytryptamine and Cysteine	274
YUKIO KITADE, DAVID K. ALSTER, AYSUN PABUCCUOGLU, AND PAUL F. TORRENCE. Uridine Analogs of 2',5'-Oligoadenylates: On the Biological Role of the Middle Base of 2-5A Trimer	283
G. M. ANSTEAD, S. E. SEN, AND G. D. PRESTWICH. Evaluation of Squalene Analogues Bearing Photoreactive Groups as Inhibitors of Squalene Epox- idase and Oxidosqualene Cyclase	300
CHRISTOPHER VAN DYKE, PETER KOVACIC, AND J. PHILLIP BOWEN. Com- putational Studies on Isomerization of Imine from Penicillin and Elec- tron Transfer by Carboxyiminium Derived from β -Lactams	314
TADASHI EGUCHI, KATSUMI KAKINUMA, AND NOBUO IKEKAWA. Synthesis of 1 α -[19- ¹³ C]Hydroxyvitamin D ₃ and ¹³ C NMR Analysis of the Confor- mational Equilibrium of the A-Ring.....	327
STEVEN J. GOULD, JUNNING LEE, AND JOHN WITYAK. Biosynthesis of Streptothricin F. 7. The Fate of the Arginine Hydrogens.....	333

NUMBER 4, DECEMBER 1991

EDWARD J. CRANE III AND MICHAEL W. WASHABAUGH. General Acid Catalysis of the Cleavage of 2-(1-Hydroxybenzyl)thiamin by a Preassociation Mechanism	351
JAMES T. STIVERS AND MICHAEL W. WASHABAUGH. Normal Acid Behavior for C(α)-Proton Transfer from a Thiazolium Ion	369
ZHANG FA AND GLENN DRYHURST. Oxidation Chemistry of the Endogenous Central Nervous System Alkaloid Salsolinol	384

Information for Authors

Bioorganic Chemistry publishes accounts of research that are at the interface of chemistry and biology. The guiding principle that the Editorial Board will follow in accepting manuscripts for publication is that the research either use the principles and techniques of organic and physical organic chemistry in attempting to solve some problem of relevance to biology, or describe chemical studies that are inspired by some biological observation. Within this context, manuscripts suitable for submission are ones that deal with such topics as: characterization of the chemistry involved in new enzymatic reactions and metabolic pathways; elucidation of enzyme mechanisms and structure; application of kinetic, isotopic, stereochemical, and spectral techniques to the study of enzymes and metabolic pathways; investigations of chemical model systems for enzymes, peptides, and other biological molecules; studies related to coenzyme structure and reactivity; development of catalyst systems that mimic enzymes and coenzymes; achievement of useful organic transformations by the application of enzymes; description of new chemistry that results from some finding in biology; development of mechanism-based and active site-directed inhibitors for enzymes, and characterization of the chemistry associated with their inhibition; investigation of the structure and mechanism of action of pheromones and other chemical communicants; determination of the molecular mechanisms for the action of hormones and of the molecular basis of pharmacology; elucidation of the principles involved in receptor site recognition; chemical modifications of nucleic acids and the application of such modifications to the manipulation of genetic material.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Bioorganic Chemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Although the journal will be devoted primarily to the publication of regular articles, Reviews and Preliminary Communications will also be published. In addition, Book Reviews and a Correspondence section will appear from time to time.

Regular articles must feature novel, previously unpublished material or represent full accounts of findings published earlier in preliminary form.

An acceptable *Review* may embrace the results of various workers in a given area or may feature recent developments from the author's own laboratory. A review that is distinguished by a novel interpretation or representation of earlier findings is especially suitable. The Editor welcomes inquiries concerning the suitability of a particular topic for a review article.

Preliminary Communications will receive accelerated publication and should describe particularly novel and significant new findings. They should be accompanied by a brief abstract and should not exceed 5 printed pages in length (approximately 3000 words), including references, tables, and figures.

Letters to the Editor offering interpretations of data that are different from those published by other authors will be entertained and, along with the original authors' rebuttal, will be considered for inclusion in the *Correspondence* section. It is hoped that this section will offer a forum where points of contention concerning various topics of interest to the field of bioorganic chemistry can be discussed in print. From time to time this section will also include announcements and summaries of meetings that are of interest to bioorganic chemists.

Address all submitted manuscripts and correspondence to:

Dr. Gordon A. Hamilton
Editor, *Bioorganic Chemistry*
Department of Chemistry
152 Davey Laboratory
Pennsylvania State University
University Park, Pennsylvania 16802

Manuscripts should be written in a clear and accurate fashion with careful attention to detail. Submit manuscripts (in English) in quadruplicate (one original and three copies), with copies of graphs, drawings, organic structural formulas, etc., suitable for direct reproduction. All material (including tables, legends, reference lists, and footnotes) should be typed double spaced on one side of $8\frac{1}{2} \times 11$ -in. white bond paper with 1-in. margins on all sides. Each page of the manuscript should be numbered. Page 1 should contain the article title, author's name (without degrees), affiliation, a short running title (not exceeding 45 letters and spaces), and an address to which proof should be mailed. Page 2 should contain a short abstract. Acknowledgments may be included as a separate section.

All nomenclature should be simple, unambiguous, and in conformity with the conventions developed by Chemical Abstracts and the International Union of Pure and Applied Chemistry. For further information regarding nomenclature, authors are advised to consult the Instructions to Authors of the *Archives of Biochemistry and Biophysics* (1991) **284**, xvi–xxii. Reprints are available from the Publisher.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Abbreviations should be in accordance with the International System (SI) as adopted by the 11th General Conference on Weights and Measures. Common abbreviations are: meter, m; centimeter, cm; millimeter, mm; micrometer, μm ; nanometer, nm; kilogram, kg; gram, g; milligram, mg; microgram, μg ; nanogram, ng; milliliter, ml; microliter, μl ; molar, M; millimolar, mM; micromolar, μM ; normal, N, millicurie, mCi; microcurie, μCi ; counts per minute or second, cpm or cps; disintegrations per minute or second, dpm or dps; centigrade, $^{\circ}\text{C}$; seconds, s; minutes, min; hours, h; standard deviation, SD; standard error, SE; percent, %; melting point, mp; boiling point, bp; calorie, cal; kilocalorie, kcal; nuclear magnetic resonance, NMR; infrared, ir; ultraviolet, uv; number, No.; Ångström units, Å; cycles per second, Hz; parts per million, ppm; Equation, Eq.

Tables must appear on a separate sheet with a descriptive title typed double spaced above the table. Tables must be numbered consecutively with Arabic numerals in order in the text.

Figures and graphs are to be numbered consecutively in Arabic numerals and cited in order in the text; legends should be typed double spaced on a separate sheet. Graphs should be plotted with black India ink on white paper no larger than $8\frac{1}{2} \times 11$ in., with coordinates properly labeled; grid lines that are to show should be inked in black. Original drawings no larger than $8\frac{1}{2} \times 11$ in. (21×27.5 cm) are preferred. The following standard symbols should be used in the legends to the figures because they are readily available to the printers:

Photographs should be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible. Illustrations in color can be accepted only if the authors defray the cost.

Structural formulas and chemical equations should be typed or drawn with care, and arranged to fill space economically. Since chemical structures will be reproduced directly from manuscript copy, authors are asked to prepare such material using appropriate templates and to check it carefully before manuscript submission.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet, starting with the title; in tables they should be noted by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by underlined Arabic numerals in parentheses. They must appear on a separate sheet, listed in numerical order, i.e., in accordance with order of citation in the text. Styling of references should conform to the following format (authors should refer to *Chemical Abstracts Service Source Index*, 1985, for styling of journal titles):

1. HAMILTON, G. A., AND BUCKTHAL, D. J. (1982) *Bioorg. Chem.* **11**, 350–370.
2. JARDETSKY, O., AND ROBERTS, G. C. K. (1981) *NMR in Molecular Biology*, pp. 417–447, Academic Press, New York.
3. OPPENHEIMER, N. J. (1982) in *The Pyridine Nucleotide Coenzymes* (Everse, J., Anderson, B., and You, K., Eds.), pp. 51–89, Academic Press, New York.

Proofs will be sent to the corresponding author. Authors will be charged for excessive alterations.

Fifty reprints of each article will be supplied free of charge. Additional reprints may be purchased; an order form will accompany proofs.

BIOCHEMISTRY INTERNATIONAL

published by
Academic Press

for the
International Union of Biochemistry

The Journal is published in three volumes a year,
each volume containing six issues.

Publication

As one volume (6 issues)
every 4 months

Québec, Canada

Experimental and Molecular Pathology

presents articles on disease processes in relation to structural and biochemical alterations in mammalian tissues and fluids and on the application of the newer techniques of analytical chemistry, histochemistry, pharmacology, toxicology, and electron microscopy to problems of pathology in humans and animals. The journal also includes studies on the mechanism of action of drugs, vaccines, and pyrogens, among other topics, when related to alterations in tissue.

Research Areas Include

- Chemotherapy
- Endocrinology
- Geographic pathology
- Immunology
- Nutrition
- Virology

Volumes 54-55 (1991), 6 issues ISSN 0014-4800
